

## **Special People's Choice (Popular Vote) Celebration Room Category for the 2021 Bismarck, ND TLR Convention**

Any display/module/scene, structure or other revenue or non-revenue railroad model that a modeler has built, which features special effects such as lighting, sound, animation or other implementation of recent technology. This can include commercial devices such as grade crossings, billboards, lights going on/off in sequence, lightning/thunder storms, animated loading facilities, moving ice skaters, vehicles moving, etc., as well as decoders controlling special effects or microcontrollers (e.g., Arduino, Raspberry Pi, Raspberry Pi Pico, other) controlling a sequence of special effects, motion activated scenes, etc. This may involve solely incorporating electronic components or extend to programming (e.g., software code, configuration variables, etc.) to activate the lighting/sound/animation effects.
